PROFESSIONAL SUMMARY

Business Intelligence, FP&A and Automation professional with 2+ years of experience in MIS reporting, financial analysis, dashboard development and workflow automation. Skilled in Power BI, DAX, Power Query, SQL, Advanced Excel and Python, with hands-on experience building financial and operational dashboards, forecasting models, SAP reporting workflows and browser-based process automation. Experienced in translating business requirements into repeatable reporting processes and actionable insights.

CORE SKILLS

BI & Visualization: Power BI, DAX, data modelling, KPI dashboards, slicers, drill-downs, row-level security (RLS)
Data & Querying: SQL, data extraction, joins, data cleaning, data validation
Automation & Data Preparation: Python, pandas, Playwright, Power Query, Excel automation, workflow automation
Finance & Analytics: FP&A, P&L reporting, budgeting, forecasting, variance analysis, trend analysis, management reporting
Excel: Advanced Excel, PivotTables, XLOOKUP, VLOOKUP, SUMIFS, COUNTIFS
Additional: Statistical analysis, predictive modelling, Java, C

PROFESSIONAL EXPERIENCE

FP&A Executive / Data Analyst & MIS | EC-Council

Hyderabad, India | May 2026 – November 2026

- Prepared monthly Profit & Loss (P&L) reports, financial forecasts and budget-versus-actual variance analysis for management review.
- Developed interactive Power BI dashboards covering revenue, expenses, budget versus actuals and key financial KPIs.
- Built forecasting models using Python time-series methods, including Holt's Exponential Smoothing and Holt-Winters.
- Supported budgeting, financial planning, trend analysis and management reporting for finance stakeholders.
- Used Power Query, DAX, SQL, Python and Advanced Excel to streamline data preparation, reporting and validation.
- Worked with finance and business stakeholders to explain variances and support data-driven decisions.
- Worked on SAP reporting and invoice-process automation using Python and Playwright-based browser workflows.

Data Analyst & MIS Executive | KFin Technologies

Hyderabad, India | August 2024 – April 2026

- Prepared monthly and quarterly MIS reports for senior management, ensuring accurate and timely delivery of business metrics.
- Extracted, cleaned and analysed large datasets using SQL and Excel to support reliable reporting.
- Created dashboards and visual reports to communicate trends, KPIs and operational performance.
- Responded to ad-hoc reporting requests by preparing customised analysis and summaries for business stakeholders.
- Performed data-quality checks, investigated discrepancies and improved the reliability of recurring reports.
- Worked with cross-functional teams to understand reporting requirements and streamline repetitive reporting workflows.

SELECTED PROJECTS & AUTOMATION

P&L Automation Control Center – Multi-Entity Financial Reporting

Python | Playwright | Streamlit | Pandas | Excel | SAP

- Developed a Streamlit-based control center to organise monthly P&L reporting inputs, monitor file readiness and provide visibility into the automation workflow across 14 entities.
- Automated SAP Multidimensional report navigation, selection of the CFS saved view, parameter handling, hierarchy expansion and Excel export using Python and Playwright.
- Built modular processing workflows for currency updates, manpower updates, COGS updates and GL data updates, with a master validation stage to review readiness.
- Implemented workspace and input-file checks to identify missing monthly reporting files before downstream processing.
- Structured the workflow to keep internal allocations outside the current release scope while allowing the remaining reporting steps to proceed.

- Designed the process to reduce repetitive manual SAP navigation, file handling and monthly reporting preparation.

SAP Invoice Extraction & Salesforce Upload Automation

Python | Playwright | Excel | SAP | Salesforce

- Built a browser automation workflow to access SAP, locate invoice records, download invoice files and support their subsequent upload into Salesforce.
- Used an Excel control file to manage invoice-related inputs and guide the automation workflow.
- Automated navigation through SAP invoice search and download steps using Playwright.
- Added entity-specific handling, invoice lookup is performed through the Reference section rather than the Billing Document section.
- Separated browser interaction logic into reusable helper scripts and used UI-control inspection to support reliable element identification.
- Designed the workflow to reduce repetitive manual downloading, file handling and Salesforce upload activities.

FP&A Reporting & Forecasting

Power BI | DAX | Power Query | SQL | Python

- Developed financial reporting dashboards for P&L, revenue, expenses, budget-versus-actual analysis and key financial KPIs.
- Built Python-based forecasting models using Holt's Exponential Smoothing and Holt-Winters methods to support revenue and expense projections.
- Used Power Query and SQL to prepare, combine and validate reporting data from finance sources.
- Analysed actual-versus-budget movements and prepared variance insights to support management reporting and financial planning.

MIS Reporting Dashboard

Power BI | Power Query | DAX

- Designed an interactive MIS dashboard with KPI cards, slicers, filters and trend analysis.
- Integrated, cleaned and transformed sales data using Power Query and created analytical measures using DAX.
- The original project record reports approximately 15–20% lower manual reporting effort and 10–15% faster report turnaround; retain these figures only if you can substantiate them.

Canara Robeco Mutual Fund – CCU Analytics

Power BI | SQL | Advanced Excel

- Developed contact-centre dashboards to monitor answered calls, IVR usage, Average Handling Time (AHT) and call volumes.
- Built email and ticket analysis views covering ticket status, turnaround time, backlog trends and agent productivity.
- Analysed customer interactions to identify operational bottlenecks and support service-level and process improvements.
- Used Excel formulas and PivotTables to support data preparation and recurring operational reporting.

EDUCATION

B.Sc. – Computer Science & Statistics | Nalanda Degree College, Vijayawada | June 2024
Relevant coursework: Data Analysis, Database Management, Business Intelligence and Statistics.

CERTIFICATIONS

- Certified Data Analyst (Microsoft Power BI) – AIM Technologies
